FOR IMMEDIATE RELEASE

BIOHITECH AMERICA ADDS TWO MORE HOSPITALS TO THEIR HEALTHCARE ROSTER

Food waste generated from 11,510 hospitals beds across the globe is being diverted from landfills by using the BioHitech America solution

CHESTNUT RIDGE, NY – December 1, 2014 – [BioHitech America](#), the most innovative solution to food waste removal, is adding two more hospital systems to their list of nearly two dozen healthcare clients. Their on-site Eco-Safe Digester was recently installed at Boston Medical Center in Boston and Baystate Medical Center in Springfield, MA.

“Hospitals around the country strive to reduce waste generated each day,” said Frank E. Celli, CEO of BioHitech America. “Because the disposal of most of this waste requires specific processes and in some cases regulation, the disposal of food waste has often times been overlooked. However with upcoming legislation in specific cities and states, banning food waste from landfills, food waste disposal is now becoming a priority.”

BioHitech America’s unique solution to food waste combines green technology with the power of big data. The company’s Eco-Safe Digester, an on-site aerobic digester, eliminates up to 2,400 pounds of food waste in a 24-hour period by converting it into nutrient-neutral water and transporting the water safely through standard sewer lines. The BioHitech Cloud, a reliable, manageable and secure reporting platform measures key metrics to optimize the food waste disposal process and help eliminate food waste from the start.

The BioHitech America is currently helping hospitals across the globe manage their food waste in an environmentally friendly and cost efficient manner. Some of the hospital system clients include Parkland Health, Veterans Health Administration, Broward Health, Yale New Haven Hospital, and Rabin Medical Center.

“The overall results since installing the Eco-Safe Digester have been more than we expected, said Ken Vervoordt, Operations Manager – Food and Nutrition, Hackensack University Medical Center. “Not only are we diverting 11 tons of food waste per month from landfills, but we have been able to cut our waste disposal budget by 50%.”

About BioHitech America

BioHitech America’s unique solution to food waste combines green technology with the power of big data to offer transparency, savings and a sustainable future. The company’s Eco-Safe Digester, an on-site aerobic digester, eliminates up to 2,400 pounds of food waste in a 24-hour period by converting it into nutrient-neutral water and transporting the water safely through standard sewer lines. The BioHitech Cloud, a technology platform hosted by Amazon, measures key metrics to optimize the food waste disposal process. These metrics are providing the industry with an unprecedented level of transparency that not only helps to reduce the amount of waste generated, but also improve company-wide efficiency and profitability.

The BioHitech America solution is the leading sustainable method that allows businesses to move towards the prevention of waste altogether. For more information, please visit www.biohitech.com.
