FOR IMMEDIATE RELEASE

BioHitech America To Exhibit The Most Viable Solution To Combat Food Waste At MassRecycle's Conference

The 2015 R3 Recycling & Organics Conference & Trade Show will bring together elected officials, business leaders and industry experts to address waste management issues

CHESTNUT RIDGE, NY – MARCH 12, 2015 – [BioHitech America](#), a green technology company that provides an innovative data-driven solution for food waste removal, will showcase the company's unique solution and revolutionary technology at the MassRecycle 2015 R3 Recycling & Organics Conference & Trade Show. The conference will be held on Monday, March 30 from 9 a.m. to 4:30 p.m. at the Boston Marriot Quincy, 1000 Marriot Drive, Quincy MA.

Food waste accounts for the majority of municipal solid waste and significantly contributes to the country's methane emissions as it decomposes in landfills. BioHitech America's solution goes beyond just diverting food waste from landfills; it combines on-site food waste removal technology with Big Data to help businesses understand what is being wasted in order to eliminate it.

"Our goal at BioHitech is not only to divert food waste from landfills, but to empower generators of food waste with the transparency and knowledge that will allow them to make proactive decisions so they can begin to effectively prevent waste all together," states BioHitech America CEO, Frank E. Celli.

MassRecycle is a statewide collaboration dedicated to building awareness on the economic, social and environmental benefits of reducing, reusing and recycling. The 2015 R3 Recycling & Organics Conference & Trade Show will bring together various leaders, businesses, industry experts and organizations to network, learn and develop pragmatic solutions to combat waste management issues.

At the conference, BioHitech will exhibit information and literature on the company's Eco-Safe Digester, an on-site aerobic digester that eliminates food waste by converting it into nutrient-neutral water or "grey-water" and transporting it through standard sewer lines. The Eco-Safe Digester is equipped with an on board scale that weighs food waste each time it is added, determining where, when, and what food waste is being disposed. The BioHitech Cloud, a technology platform hosted by Amazon, measures key metrics to offer businesses the data

needed to optimize the food waste disposal process and identify the way to prevent it from being generated.

“We are very excited to participate in this conference especially since it is being held at a location that is currently utilizing our sustainable technology to divert the hotel’s food waste from being sent to landfills,” comments Mr. Celli. “Gatherings like R3 Conferences are crucial for the fostering of new solutions and the development of a more sustainable future where the sharing of ideas can become action that supports businesses while benefiting our environment.”

BioHitech America currently provides its innovative solution to numerous high volume generators in various industries in over 300 locations across the globe. Their solutions have helped reduce the amount of waste sent to landfills while also helping business owners and operators adjust seamlessly to waste bans like the recent Massachusetts Commercial Food Waste Disposal Ban implemented on October 1, 2014.

About BioHitech America

BioHitech America’s unique solution to food waste combines green technology with the power of Big Data to offer transparency, savings and a sustainable future. The company’s Eco-Safe Digester, an on-site aerobic digester, eliminates up to 2,400 pounds of food waste in a 24-hour period by converting it into nutrient-neutral water and transporting the water safely through standard sewer lines. The BioHitech Cloud, a technology platform hosted by Amazon, measures key metrics to optimize the food waste disposal process. These metrics are providing the industry with an unprecedented level of transparency that not only helps to reduce the amount of waste generated, but also improve company-wide efficiency and profitability.

BioHitech America was recently selected to participate in the exclusive Credit Suisse Private Innovation Circle event. Their solution is the leading sustainable method that allows businesses to move towards the prevention of waste altogether. For more information, please visit www.biohitech.com.
